

Corrugated Display Rack Assembly Guide

- 1 - The rack ships flat. Unfold it.
- 2 - Turn it upside down. You'll work from the bottom to assemble the base.
- 3 - Note two opposing flaps have one perforation and two flaps have two perforations.
- 4 - Fold in the two flaps with one perforation. These loosely meet in the middle.
- 5 - Fold in the two flaps with two perforations. These tightly tuck into the first flaps.
- 6 - Ensure a tight, flap bottom surface. Turn the rack right side up.
- 7 - You may have to push or pull a little on the four flaps to get them tight and level.
- 8 - Fold under the corners of the shelf.
- 9 - Push the shelf down onto the level surface of the four flaps for sturdy support.
